

1 Install and Uninstall the phpBB [Personal Data](#) MOD

1.1 Installation

It is assumed that a phpBB3 forum has been set up completely and this phpBB3 forum is stored in directory phpBB/. In addition, the [Personal Data](#) MOD has been downloaded and is available as zip file (personaldata-kauri_v2-0.zip). The installation procedure was tested for phpBB3.0.7 with [Personal Data](#) 2.0. If other versions of phpBB are used or if additional MODs are already installed, the installation procedure for [Personal Data](#) MOD may differ from this instruction guide.

Installation with AutoMOD

*AutoMOD*¹ is a modification for phpBB which allows installation of other modifications as automated as possible.

1. Unzip file personaldata-kauri_v2-0.zip in directory phpbb3/store/mods/. (It is also possible to unzip the file locally and upload the whole folder personaldata-kauri_v2-0/ to the web server.)
2. Login as administrator to the forum and open the *Administration Control Panel*.
3. In tab „AUTOMOD“ there is a list called „uninstalled MODs“ containing the entry [Personal Data](#). Start the installation with click on „Install“.
4. Then, an overview with all changes is displayed. If an entry is not labelled as „Success“, possible reasons may be that a previous version of [Personal Data](#) was not completely uninstalled or that the source code of the phpBB3 forum was already changed by another MOD. The errors have to be solved directly in the source code (cf. following section about manual installation). Another possible reason for errors during installation with AutoMOD may be missing access rights for directories and/or files.

Manual Installation

Due to the significant lower effort installation with *AutoMOD* is recommended. However, for manual installation the following steps need to be done:

1. Unzip file personaldata-kauri_v2-0.zip.
2. Open personaldata-kauri_v2-0/install_mod.xml in web browser.
In case the file is displayed unformatted, the following files have to be copied to any directory on the web server in advance:
personaldata-kauri_v2-0/install_mod.xml and
personaldata-kauri_v2-0/modx.prosilver.en.xsl
3. Now in the web browser window it is displayed which changes need to be done. These changes include copying files and minor editing of existing phpBB3 files. Furthermore, three SQL queries need to be executed. In case the phpBB3

¹<http://www.phpbb.com/mods/automod/>

installation runs with a MySQL database, this can be done using *MySQL-Query-Browser* or *MySQL-Development*². The name of the database in the SQL queries is „phpbb3“.

4. Then, installation is finished and **Personal Data** MOD works. In case it is still not visible on top of the forum, try the following: Make sure to be logged in as administrator and open the *Administration Control Panel*. Go to tab „GENERAL“ look for entry „Load settings“ and set „Recompile stale style components“ to „Yes“. Then go back to main view of the „GENERAL“ tab and clean the forum cache using „Purge the cache“.

1.2 Uninstalling

When installed with *AutoMOD*, **Personal Data** can be deactivated in the *Administration Control Panel*: open tab „AUTOMOD“ and click „Uninstall“. Please note that after this click the MOD is only deactivated and not completely uninstalled. For uninstalling of **Personal Data** the following steps need to be done:

1. Open file `personaldata-kauri_v2-0/install_mod.xml` in a web browser.
In case the file is displayed unformatted, the following files have to be copied to any directory on the web server in advance:
`personaldata-kauri_v2-0/install_mod.xml` and
`personaldata-kauri_v2-0/modx.prosilver.en.xsl`
2. Now in the web browser window it is displayed which changes have been done during installation. All changes need to be undone in the phpBB3 source code (instructions for SQL statements and deletion of files are provided in the next steps).
3. Run the following SQL statement
`DROP TABLE phpbb3.phpbb_user_actions, phpbb3.phpbb_user_actiontypes;`
(If the name of the database is „phpbb3“.)
4. Finally, delete the following directories and files:
 - (a) Directory `phpbb3/includes/personaldata/`
 - (b) File `phpbb3/language/en/mods/personaldata.php`
 - (c) File `phpbb3/language/de/mods/personaldata.php`
 - (d) Files `phpbb3/styles/prosilver/imageset/priv_*.png`
 - (e) Directory `phpbb3/styles/prosilver/template/personaldata/`
 - (f) File `phpbb3/styles/prosilver/theme/images/bg_priv_list.png`
 - (g) File `phpbb3/styles/prosilver/theme/personaldata.css`
